

Developer: Nurul Iman Binti Muhammad Husni

App Name: WeVolt (SDG 7)

Objective Feedback:

- **UI/UX Consistency (Material Design):** The app demonstrates strong UI/UX consistency by utilizing clean Material Design components. The use of structured cards for the charger lists and clear typography makes the interface highly readable and intuitive. The distinct categories for standard and solar chargers are visually well-organized.
- **Navigation Flow:** The video shows a very logical and smooth navigation flow. The transition between the 5 core screens is seamless. The user journey from searching for a charger to completing the booking form makes perfect sense without any confusing jumps or broken back-stack navigation.
- **App Functionality (ViewModel State):** The video successfully demonstrates the ViewModel sharing data across different screens. When a new booking is submitted via the Booking Form, the state updates instantly, and the data is successfully shared and displayed on the History screen. This proves the state hoisting and list management within the ViewModel are working exactly as intended.
